Tips for installing Centric Remanufactured Calipers:

APPLIED VEHICLE: All Vehicles with Calipers

SERVICE INFORMATION:

Check vehicle service information for any special procedures (electronic piston retracting procedures, electronic SBC system disabling, ETC) before beginning service.

- Upon receipt, make sure that replacement caliper matches old caliper
- Always install caliper with bleeder(s) toward the highest point of the caliper
- Inspect brake hoses and lines for wear, degradation, or damage, repair or replace as necessary
- Flush old brake fluid from system before installing replacement caliper
- Use vehicle manufacturer's recommended brake fluid
- Follow vehicle manufacturer's recommended bleeding procedure
- Follow vehicle manufacturer's torque specifications for all fasteners
- Road test vehicle after service to check for proper operation. Check for brake fluid leaks after road test.
